Business can send exclusive promotions, coupons, and limited-time deals to subscribers.

Personalized Recommendations – Emails can suggest products, shows, or content based on a subscriber's preferences or previous activity.

WHICH HOUR OF DAY HAS THE HIGHEST STREAMS

Overall, the graph tells the story of a platform that comes alive as the day unfolds. Viewers gradually tune in throughout the morning, stay highly engaged during the afternoon, and slowly disconnect as the night draws to a close. These insights suggest that the afternoon to early evening (12:00 PM–6:00 PM) is the ideal time to release new content, send promotional emails, or schedule live events to maximize audience reach and engagement.

CONCLUSION

A vintage television set with a silver frame and a wooden stool. The TV screen displays a Pivot chart titled 'Bright tv user profile'. The chart shows a grid of data points in shades of blue and green, representing user engagement across various demographic segments. The text 'Bright tv user profile' is overlaid on the chart.

Bright tv user profile

Based on the Pivot chart analysis presented, Bright TV demonstrates strong engagement across a diverse subscriber base, with viewership distributed across multiple age groups, regions, channels, and demographic segments. The charts provide valuable insights into audience behaviour, highlighting viewing trends by day, time, gender, ethnicity, and location. The analysis reveals clear opportunities to optimize programming schedules, target content more effectively, and enhance subscriber engagement by understanding peak viewing periods and audience preferences. Overall, the findings indicate that Bright TV has a broad and active audience, and the data-driven insights generated through Pivot chart can support informed strategic decisions to improve content delivery, increase viewership, and drive future subscriber growth.

THANK YOU!
